

THE JOURNAL OF THORACIC AND CARDIOVASCULAR SURGERY

Vol. 138, No. 4, October 2009

Condensed Contents

Expert Commentary

- 807 Antiplatelet agents used for early intervention in acute coronary syndrome: Myocardial salvage versus bleeding complications** 
S. F. Aranki and S. C. Body

General Thoracic Surgery (GTS)

- 811 In situ tissue engineering for tracheal reconstruction using a luminal remodeling type of artificial trachea**
T. Nakamura, T. Sato, M. Araki, S. Ichihara, A. Nakada, M. Yoshitani, S.-i. Itoi, M. Yamashita, S.-i. Kanemaru, K. Omori, Y. Hori, K. Endo, Y. Inada, and K. Hayakawa
- 820 Pulmonary aspergilloma: Analysis of prognosis in relation to symptoms and treatment**
J. G. Lee, C. Y. Lee, I. K. Park, D. J. Kim, J. Chang, S. K. Kim, and K. Y. Chung
- 826 Asymptomatic congenital cystic adenomatoid malformation of the lung: Is it time to operate?**
A. Conforti, I. Aloï, A. Trucchi, F. Morini, A. Nahom, A. Inserra, and P. Bagolan
- 831 Impact of tumor length on long-term survival of pT1 esophageal adenocarcinoma**
W. D. Bolton, W. L. Hofstetter, A. M. Francis, A. M. Correa, J. A. Ajani, M. S. Bhutani, J. Erasmus, R. Komaki, D. M. Maru, R. J. Mehran, D. C. Rice, J. A. Roth, A. A. Vaporciyan, G. L. Walsh, and S. G. Swisher
- 837 Intraoperative ultrasonographic localization of pulmonary ground-glass opacities**
R. Kondo, K. Yoshida, K. Hamanaka, M. Hashizume, T. Ushiyama, A. Hyogotani, M. Kurai, S. Kawakami, M. Fukushima, and J. Amano

- 843 Venous thromboembolism in patients receiving multimodality therapy for thoracic malignancies**
A. Patel, M. Anraku, G. E. Darling, F. A. Shepherd, A. F. Pierre, T. K. Waddell, S. Keshavjee, and M. de Perrot

- 849 Is there a subset of patients with preoperatively diagnosed N2 non-small cell lung cancer who might benefit from surgical resection?**
G. B. Ratto, R. Costa, P. Maineri, A. Alloisio, P. Bruzzi, and B. Dozin

Acquired Cardiovascular Disease (ACD)

- 859 Long-term results of aortic valve-sparing operations in patients with Marfan syndrome**
T. E. David, S. Armstrong, M. Maganti, J. Colman, and T. J. Bradley
- 865 Endovascular stent graft placement in patients with type B aortic dissection: A meta-analysis in China** 
J. Xiong, B. Jiang, W. Guo, S.-M. Wang, and X.-Y. Tong
- 873 Obesity is associated with increased morbidity after coronary artery bypass graft surgery in patients with renal insufficiency**
D. A. Tolpin, C. D. Collard, V.-V. Lee, M. A. Elayda, and W. Pan
- 880 Predictive factors for endoleaks after thoracic aortic aneurysm endograft repair**
G. Piffaretti, G. Mariscalco, C. Lomazzi, N. Rivolta, F. Riva, M. Tozzi, G. Carrafiello, A. Bacuzzi, M. Mangini, M. Banach, and P. Castelli
- 886 Results of mitral valve annuloplasty with a standard-sized posterior band: Is measuring important?**
M. L. Brown, H. V. Schaff, Z. Li, R. M. Suri, R. C. Daly, and T. A. Orszulak

(continued on page 4A)

- 892** Is total arch replacement combined with stented elephant trunk implantation justified for patients with chronic Stanford type A aortic dissection?

L.-Z. Sun, R.-D. Qi, Q. Chang, J.-M. Zhu, Y.-M. Liu, C.-T. Yu, B. Lv, J. Zheng, L.-X. Tian, and J.-G. Lu

- 897** A comparison before and after aprotinin was suspended in cardiac surgery: Different results in the real world from a single cardiac center in China

X. Wang, Z. Zheng, H. Ao, S. Zhang, Y. Wang, H. Zhang, L. Li, and S. Hu

- 904** An Australian risk prediction model for 30-day mortality after isolated coronary artery bypass: The AusSCORE

C. Reid, B. Billah, D. Dinh, J. Smith, P. Skillington, M. Yui, S. Seevanayagam, M. Mohajeri, and G. Shardey

Congenital Heart Disease (CHD)

- 911** Long-term results of right ventricular outflow tract reconstruction in neonatal cardiac surgery: Options and outcomes

A. K. Kaza, H.-G. Lim, D. J. Dibardino, V. Bautista-Hernandez, J. Robinson, C. Allan, P. Laussen, F. Fynn-Thompson, E. Bacha, P. J. del Nido, J. E. Mayer, Jr, and F. A. Pigula

- 917** A new diagnostic algorithm for assessment of patients with single ventricle before a Fontan operation

A. Prakash, M. A. Khan, R. Hardy, A. J. Torres, J. M. Chen, and W. M. Gersony

- 924** Two-year neurodevelopmental outcomes of infants undergoing neonatal cardiac surgery for interrupted aortic arch: A descriptive analysis

C. A. Joynt, C. M. T. Robertson, P.-Y. Cheung, A. Nettel-Aguirre, A. R. Joffe, R. S. Sauve, W. S. G. Biggs, N. J. Leonard, D. B. Ross, I. M. Rebeyka, and the Western Canadian Complex Pediatric Therapies Follow-up Group

- 933** Minimally invasive operation for congenital heart disease: A sex-differentiated approach

V. L. Vida, M. A. Padalino, G. Boccuzzo, A. A. Veshti, S. Speggorin, G. Falasco, and G. Stellin

- 937** Device management of arrhythmias after Fontan conversion

S. Tsao, B. J. Deal, C. L. Backer, K. Ward, W. H. Franklin, and C. Mavroudis

- 941** Pre-Fontan cardiac magnetic resonance predicts post-Fontan length of stay and avoids ionizing radiation

M. A. Harris, M. T. Cosulich, M. J. Gillespie, K. K. Whitehead, T. I. Liu, P. M. Weinberg, and M. A. Fogel

Perioperative Management (PM)

- 948** Prolonged mechanical ventilation after cardiac surgery: Outcome and predictors

J.-L. Trouillet, A. Combes, E. Vaissier, C.-E. Luyt, A. Ouattara, A. Pavie, and J. Chastre

- 954** Preoperative C-reactive protein levels to predict early and late mortalities after coronary artery bypass surgery: Eight years of follow-up

A. H. M. van Straten, M. A. Soliman Hamad, A. J. van Zundert, E. J. Martens, J. P. A. M. Schönberger, and A. M. de Wolf

- 959** Prophylactic nesiritide does not prevent dialysis or all-cause mortality in patients undergoing high-risk cardiac surgery

A. Ahsan Ejaz, T. D. Martin, R. J. Johnson, A. G. Winterstein, C. T. Klodell, P. J. Hess, Jr, A. K. Ali, E. M. Whidden, N. L. Staples, J. A. Alexander, M. A. House-Fancher, and T. M. Beaver

- 965** Preoperative anemia in patients undergoing coronary artery bypass grafting predicts acute kidney injury

L. De Santo, G. Romano, A. Della Corte, V. de Simone, F. Grimaldi, M. Cotrufo, and M. de Feo

(continued on page 6A)

- 971 Preoperative renal function as a predictor of survival after coronary artery bypass grafting: Comparison with a matched general population**
A. H. M. van Straten, M. A. Soliman Hamad, A. A. J. van Zundert, E. J. Martens, J. P. A. M. Schönberger, and A. M. de Wolf

Evolving Technology/Basic Science (ET/BS)

- 977 Hydrogen sulfide therapy attenuates the inflammatory response in a porcine model of myocardial ischemia/reperfusion injury**
N. R. Sodha, R. T. Clements, J. Feng, Y. Liu, C. Bianchi, E. M. Horvath, C. Szabo, G. L. Stahl, and F. W. Sellke
- 985 Layered implantation of myoblast sheets attenuates adverse cardiac remodeling of the infarcted heart**
N. Sekiya, G. Matsumiya, S. Miyagawa, A. Saito, T. Shimizu, T. Okano, N. Kawaguchi, N. Matsuura, and Y. Sawa
- 994 Association of electrostimulation with cell transplantation in ischemic heart disease**
A. Shafy, T. Laverne, C. Latremouille, M. Cortes-Morichetti, A. Carpentier, and J. C. Chachques
- 1002 Cerebral tumor necrosis factor α expression and long-term neurocognitive performance after cardiopulmonary bypass in rats**
B. Jungwirth, K. Kellermann, M. Qing, G. B. Mackensen, M. Blobner, and E. F. Kochs
- 1008 Bone morphogenic protein 2 induces Runx2 and osteopontin expression in human aortic valve interstitial cells: Role of Smad1 and extracellular signal-regulated kinase 1/2** 
X. Yang, X. Meng, X. Su, D. C. Mauchley, L. Ao, J. C. Cleveland, Jr., and D. A. Fullerton

Brief Technique Reports

- 1016 First successful transapical aortic valve implantation after aortic allograft replacement**
M. Schmoekkel, P. Boekstegers, K. Nikolaou, and B. Reichart

- 1018 Minimally invasive transapical aortic valve-in-a-valve implantation for severe aortic regurgitation in a degenerated stentless bioprosthesis**

T. G. Kelpis, N. E. Mezilis, V. N. Ninios, and A. A. Pitsis

- 1020 “Valve-in-valve” implantation in a patient with stentless bioprosthesis and severe intraprostatic aortic regurgitation**

D. Attias, D. Himbert, U. Hvass, and A. Vahanian

- 1022 Feasibility of transapical aortic valve implantation fully guided by transesophageal echocardiography**

E. Dumont, J. Lemieux, D. Doyle, and J. Rodés-Cabau

- 1025 Aortic valve replacement and mitral valve repair as treatment of complications after percutaneous core valve implantation**

C. Comoglio, M. Boffini, S. El Qarra, F. Sansone, M. D’Amico, S. Marra, and M. Rinaldi

- 1027 Totally percutaneous valve replacement for severe aortic regurgitation in a degenerating bioprosthesis**

M. Napodano, A. Cutolo, C. Fraccaro, G. Tarantini, R. Bonato, R. Bianco, G. Gerosa, S. Illiceto, and A. Ramondo

- 1029 Transcranial Doppler-guided selective antegrade cerebral perfusion during aortic debranching operation**

A. Khojenezhad and R. Celis

- 1031 Delayed type A dissection after arch transposition and stent graft therapy of a type B dissection**

C. A. Anderson, E. Rodriguez, M. C. Stoner, and A. P. Kypson

- 1032 Ascending aortic arch replacement with aortic valve resuspension under deep hypothermic arrest combined with endoluminal stenting of the descending thoracic aorta and the entire abdominal aorta**

M. M. Elahi, M. J. Giv, M. Krishnaswamy, C. McLachlan, P. J. Mossop, and I. K. Nixon

- 1035 Endoprosthetic exclusion of type A aortic dissection through carotid artery**

P. Ruchat, P.-G. Chassot, and E. Rizzo

(continued on page 8A)

Left: From Results of Mitral Valve Annuloplasty With a Standard-Sized Posterior Band: Is Measuring Important? By reducing the mitral valve annulus and orifice area, annuloplasty increases the zone of coaptation of the anterior and posterior leaflets. Also, annuloplasty reinforces posterior leaflet repair and prevents future annular dilatation. As shown in this figure, after all necessary mitral valve leaflet repairs are performed, a standard unmeasured annuloplasty band, featuring a flexible 63-mm partial ring, is sutured to the posterior annulus from trigone to trigone. Most often, 7 to 9 mattress sutures of 2-0 polyethylene terephthalate sutures are used. By permission of Mayo Foundation for Medical Education and Research. All rights reserved.

Center: From Association of Electrostimulation With Cell Transplantation in Ischemic Heart Disease. Cross and longitudinal section of multinucleated myotubes (marked with 4',6-diamidino-2-phenylindole dye) developed in the myocardial infarcted area after treatment with skeletal myoblasts associated with chronic electrostimulation (original magnification, $\times 360$). Until now, cell transplantation for cardiac support and regeneration was limited by poor effect in systolic function. The purpose of this study was to evaluate myogenic cell transplantation in an ischemic heart model, associated with atrial synchronized biventricular pacing. The concept of electrostimulation of homed myogenic cells (eg, skeletal myoblasts) is to transform the passive cells into active contracting cells, that is, from static cells to dynamic cells. Electrostimulation was related with enhanced

expression of slow myosin and the organization of myoblasts in myotubes, which are better adapted at performing cardiac work. The most interesting and realistic perspective for cell-based local myocardial treatments seems to be the association of cell transplantation with multisite cardiac pacing to transform a passive regenerative approach into a "dynamic cellular support."

Right: From In Situ Tissue Engineering for Tracheal Reconstruction Using a Luminal Remodeling Type of Artificial Trachea. A new mesh-type tracheal prosthesis on which autologous tracheal tissue is encouraged to regenerate on a collagen scaffold was developed. To facilitate the early epithelialization on the luminal surface, the autologous bone marrow aspirate, mesenchymal stem cells, and peripheral blood were soaked at the implantation and evaluated in beagle dogs model. The photograph shows the luminal surface of the prosthesis 3 months after reconstruction of bone marrow aspirate group. The prosthesis was incorporated into the native tracheas and the inner surface was covered with glossy and whitish tissue. Polypropylene stents were seen in the cross section of the reconstructed tracheal wall. The results obtained in the bone marrow aspirate and MSC groups were better than those in the peripheral blood group. This tracheal prosthesis appears promising for the repair of tracheal defects, and the application of autologous bone marrow may be feasible to assist the regeneration of tracheal tissue.
